

2000 Census Community Profiles Order Form

In this electronic age, it is important to have some census data documents in print. The 2000 Census Community Profiles present six tables of data for each community, representing "the essence of the census data base for the greatest variety of users." Every city, village, and township is included. The books are designed to facilitate comparison between communities. Users will want to keep these books on their shelves to use for the remainder of the decade; then, they will go to libraries for permanent reference.
